

What Happens With My Results?

Results are forwarded to the MGBCS and you will be notified of results that have been received.

If you have registrations pending because you are waiting on a DNA test, please contact the MGBCS and notify them that the DNA has been received.

What Should I Do If I Have Used A Bull That Has Died & There *Is Semen Available?*

A standard DNA test kit should be requested from the MGBCS and an unused straw should be packaged so it will not break in the post and it should be sent to the University of Queensland.

If limited semen is available the best method is to collect one drop of semen on a small square of blotting or absorbent paper prior to insemination and send this off in a standard kit.

What Should I Do If I Have Used A Bull That Has Died & There *Is No Semen Available?*

Any sire used since 2006 should have had a hair sample collected for DNA testing to allow for any progeny to be registered.

If no DNA is available, please write a letter to the MGBCS Board of Directors explaining your situation and the reasons why a DNA sample has not been collected and your case will be examined.

How Do I Know If a Bull I Am Using Has Been DNA tested?

Use the 'Animal Enquiry' Screen via the MGBCS website by searching for the animal using their name or ident. If the bull has been DNA typed then the words 'DNA Typed' and a number will appear in the animals' details. If this information does not appear then the animal has not been DNA typed and you need to contact the MGBCS for a sample kit. Alternatively you can contact the MGBCS.
